**DETAILED ACTION**

**TWO SPECIE ELECTIONS ARE REQUIRED AS FOLLOWS:**

**FIRST SPECIE ELECTION REQUIREMENT:**

This application contains claims directed to the following patentably distinct species of the claimed invention:

Species of perturbation as listed separately in instant claims 43-54, or, alternatively, an unspecified perturbation not listed in said claims.

These species of perturbation are distinct due to the set of cellular constituents which are perturbed thereby are generally separately published. For example, the perturbation caused by a pharmacological agent as in claim 43 most commonly will already have at least somewhat known cellular constituent expression responses for each such agent, classified as such, however, a drug candidate as cited in claim 45, for example, is most commonly uncharacterized, or, at best, only presumptively associated with some type of response thus making the expression characteristics a scientific research project compared to expression profiling for a known pharmacological agent response due to a perturbation. This type of distinctness exists between the other listed perturbations also thus resulting in an undue search burden if they are searched together versus the far more limited search burden for each specie searched separately.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is

Art Unit: 1631

finally held to be allowable. Currently, claims 14-27 and 55-94 are generic to the above list of species.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

#### **SECOND SPECIE ELECTION REQUIREMENT:**

This application contains claims directed to the following patentably distinct species of the claimed invention:

Art Unit: 1631

Species of organism type, such as listed in claims 59-62, or, alternatively, an unspecified organism.

Species of organism greatly affect the study regarding any biological system. Each system is well known to contain its own distinct set of genes and cellular constituents as well as responses thereto thus supporting the undue search burden if they are searched together.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 14-27, 43-58, and 63-94 are generic to the above species.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record

Art Unit: 1631

showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
